

TVAR Solutions and Leidos

A Partnership Built on Trust, Expertise, and Success

TVAR Solutions has been a trusted Leidos partner since 2016. As an EPA holder and the 2019 Leidos Small Business Partner of the Year, TVAR has supported Leidos on numerous federal programs, both for capture initiatives and program deployments.

We pride ourselves on delivering value and expert guidance for even the most complex technology initiatives, all at a competitive price point to ensure successful programmatic outcomes. TVAR understands all facets of the federal agency IT enterprise and we go the extra mile in supporting Leidos with engineering and technical expertise, industry best solutions, problem solving, and insights from our extensive federal experience.

Technology solution areas we frequently support include:

 Enterprise data backup and recovery	 Application load balancing	 Security compliance
 Device security	 Network firewalls	
 Network IPS/IDS	 SCAP compliance	 Identity management

Success Story: CMS

TVAR Solutions has supported Leidos for ongoing information technology sustainment activities on various task orders, primarily focused on data center infrastructure, high availability, disaster recovery, cybersecurity, and application performance. These task orders were originally part of CMS's Virtual Data Center (VDC) program and addressed a multitude of technology requirements. In addition, TVAR worked with Leidos on new program capture efforts at CMS.

Our scope of work included:

- Technology evaluation
- Technology research
- Technology introduction
- Robust and resilient architectures
- IV&V for enterprise backup and recovery
- Enterprise backup and recovery architecture analysis

Success Story: NASA

TVAR helped Leidos with successful capture efforts for two enterprise IT services programs: the NASA End-User Services and Technologies (NEST) contract and the Advanced Enterprise Global Information Technology Solutions (AEGIS) contract.

For NEST, TVAR supported Leidos with pricing assistance in its capture effort. That effort led to us assisting Leidos with AEGIS, where we leveraged our understanding of NASA and the IT challenges that confronted the agency, to help tailor solutions that would provide true enterprise shared services capabilities across all NASA centers. Our support was focused on data center infrastructure, high availability, disaster recovery, cybersecurity, and hybrid cloud scenarios.

Other Leidos programs TVAR has supported

Why TVAR Solutions

We make our partners look good by leveraging our expertise and unbiased analysis to help them arrive at the optimal solution for the client challenge at hand. While we are a trusted reseller in the federal space, we are also far more than that. We help research and develop alternative solutions, evaluate and verify new technologies, coordinate POCs and demos, and optimize solution architectures to deliver added value. A few other reasons why we are highly trusted by our clients:

- Solution neutrality
- Independent architecture and design review
- Vendor research and evaluation
- EPA vendor
- Leverage vendor pricing programs
- Align solution to mission objectives
- Provided asset management support

Agency	Program	Technology Area
Air Force	AFNCR	Data Center Infrastructure
DHS Support	Secure Enterprise Network Systems, Services and Support (SENS3)	FLETC Agency
DISA	GSMO	Network Performance
DoE	HMESC	VMware, data center infrastructure
FAA	FFSP	NISC
Navy	NGEN-SMIT	Data Center Components
